PD

DETAILED ACTION

1. Claims 1-27 are presented for examination.

Paper Submitted

2. It is hereby acknowledged that the following papers have been received and placed of record in the file:
 - a. **Information Disclosure Statements** as received on 1/8/2002 and 12/10/2003 are considered.

Specification

3. Abstract is too long.
4. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc

Double Patenting

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 1-27 are rejected under the judicially created doctrine of double patenting over claims 1-31 of U. S. Patent No. 6,772,217 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.
7. Although the conflicting claims are not identical, they are not patentably distinct from each other because the breadth of the pending independent claims 1, 11 and 19 are covered by the limitation in claims 1, 6 and 7 of '217 patent with the limitation as follow:

A method of transmitting data, comprising: initiating transfer of a large data file containing a plurality of segments over a network by transmitting one or more segments of the plurality of segments utilizing a first set of M concurrent data streams, wherein M is one or more, followed by transmitting one or more segments of the plurality of segments utilizing a second set of N concurrent data streams, wherein $N > M + 1$; during transmission utilizing the first set of M concurrent data streams, determining individual

transmission bandwidths for each concurrent data stream of the first set of M concurrent data streams and a first aggregate transmission bandwidth for the first set of M concurrent data streams; during transmission utilizing the second set of N concurrent data streams, determining individual transmission bandwidths for each concurrent data stream of the second set of N concurrent data streams and a second aggregate transmission bandwidth for the second set of N concurrent data streams; comparing the first aggregate transmission bandwidth to the second aggregate transmission bandwidth; and responsive to a determination that the second aggregate transmission bandwidth is greater than the first aggregate transmission bandwidth by a first predetermined threshold, initiating a third set of Z concurrent data streams to transfer a portion of the large data file, wherein $Z > N$.

8. Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.
